

# Being tech savvy isn't the same as being cyber savvy.

Eighty percent of reported cyber incidents occur when hackers lure someone into surrendering their passwords. Fact is, a company's digital connections are now a means to others' fraudulent ends. Make no mistake, these bad actors are smart thinkers. Which is why minimizing the risk of cyber fraud, ransomware, and data theft requires different smart thinkers. Experts who know how hackers think, how they operate and their goals. That's Sussman.

We offer:

#### **Cybersecurity Gap Analysis**

- Penetration tests that yield actionable results

**SUSSMAN** REAL SECURITY

#### **Cybersecurity Planning**

- Cyber policies

#### **Cybersecurity Training**

- Operationalizing cyberhygiene

#### **Cybersecurity Crisis Management**

- Identify, secure, detect, respond, recover & negotiating with hackers

#### **Cyber Forensics**

- Uncovering bad behaviour by hackers & governments

At Sussman we believe cybersecurity solutions need to be different in how they're delivered, how they educate, the business problems they solve and the business opportunities they awaken.
